Suitable for use in industrial applications.

Dextran Powder, Low Molecular Weight, is a glucose polymer made by the fermentation of sugar by a specific bacterium. It is defined as a “branched poly- α -d-glucoside” having predominant C-1 to C-6 bonds. Dextran polymers are freely soluble in water and other solvents. Dextran polymer is biodegradable and biocompatible and has a wide range of industrial applications in food, flavor, fragrance, Life Science and other applications. Our Dextran Powders are produced, refined and purified at our facility in Scarborough, Ontario, Canada.
